EXPERIENCE

ANZx Digital (Contract)

Jan 2025-Nov 2025 (11 months)

Senior Software Engineer

- **TrustMe** — *React Query, React Hook Form, Zod, MSW, Experian QAS, Turborepo*

Given technical ownership of a Single Page Application responsible for Identity Verification as a service used by several clients within the bank; doubling productivity (measured in pages delivered). Key feature delivered is a robust home address autocomplete component with fallbacks for international and manual address entry.

- **Bluestone** — *NextJs, Next Intl, React Hook Form, Zod, ConnectRPC, WebAuthn, Nx*

Supported development of an Existing to Bank customer migration application (ETB) featuring choose+enter One-Time Passwords. Notably implemented a passkey registration flow (login with fingerprint) using the WebAuthn spec. Part of the Claude AI trial for agentic coding to boost unit test coverage and documentation.

Origin Energy (Contract)

Dec 2023-Jan 2025 (1 year, 1 month)

Senior Software Engineer

- **Origin Zero** — *React, React Query, React Intl, Material UI, Autho*

Developed an internal B2B Single Page Application designed to monitor gas and energy usage of multi-site business clients (small, medium and large). Supported multiple authentication methods using Autho.

- **Digital Energy Sales Agreements** — *React, React Query, Material UI, Styled Components, NextJS, Nx*

Replaced sequential imperative API calls (throughout React effect blocks) in a data-heavy energy sales dashboard with declarative React Query hooks, significantly reducing cycle time of development/debugging.

Coles Supermarkets (Contract)

Jun 2021-Dec 2023 (2 years, 6 months)

Senior Software Engineer, Front-End Tech Lead

- **Coles Digital GraphQL** — *Azure, Docker, Redis, GraphQL, TypeGraphQL, DataLoader, Zod, Sentry*

Championed GraphQL at Coles, building a microservice capable of complex querying and orchestration for use across web and mobile app squads. Implemented 30% coverage of existing APIs within two months.

- **Accounts and Slot Selector** — *React, Redux Toolkit, Material UI, Styled Components, NextJS, Nx*

Lead the squad responsible for account pages and the Shopping Method and Delivery Slot Selector customer journeys among other initiatives. Enabled the squad to consistently exceed test coverage and performance / web vitals targets. Emphasized comprehensive unit testing and documentation of all front-end code delivered.

Senior Front-End Developer○ **Service Qualification** — *Cypress, Experian QAS, Formik, NextJS, XState*

As part of a “service qualification” application: built an address autocomplete component connected to an Experian QAS backend for typeahead address entry. This application qualifies the internet services available to a customer based on their address; evaluated using a NextJS-integrated backend. This application leveraged Cypress for automated integration tests across browsers – including API mocking for offline-capable tests.

○ **Entice** — *Contentful, Adobe Analytics, Google Analytics, Figma*

Developed components which took design tokens from Figma designs and content from the Contentful headless CMS and provided content pages with rich text capable components that could be rendered in many viewport breakpoints. These components focused heavily on accessibility to be screen reader friendly and keyboard accessible. All content pages sent interaction events to both Adobe and Google analytics platforms.

Australia and New Zealand Banking Group Limited (ANZ) (Contract) Sep 2018-Sep 2020 (2 years)*Senior Software Developer*○ **ANZ Apply** — *TypeScript, React, Redux, Styled Components, Formik, GraphQL, Golang*

Frontend developer on banking product origination platform, working closely with backend developers, architects, and designers to build a unified platform for originating savings and deposit products. Involved in customer testing process. Challenges include delivering within tight timelines and onboarding off-shore development teams — mitigated by significantly increasing test coverage and overall technical quality.

National Australia Bank Limited (NAB) (Contract)

Dec 2016-Sep 2018 (1 year, 9 months)

Senior Analyst, Programmer○ **nab.com.au** — *Adobe Experience Manager, Vagrant, VirtualBox, Java, Maven, AngularJS, Jekyll*

Responsible for maintaining CMS components for use by various teams within the bank. Improved AEM development virtual machine provisioning process, reducing onboarding process for new developers from a two-day manual process to a twenty-minute automatic process.

○ **Live chat component** — *TypeScript, React, Jest, Enzyme, Storybook, Genesys*

Championed development of floating “chat with an agent now” component on realestate.com.au and nab.com.au. First React project at the bank. Delivered in 5 weeks when AngularJS version was estimated to take 8 weeks. Build process produces a single, themeable JavaScript bundle for use by REA and NAB.
